Built-in Audio Sensor Enables Voice Tracking

Easily focus on active speaker with Voice Tracking Mode and Presentation Mode. The camera will follow the speaker automatically or you can set up a preset point to focus on a specific area. The built-in sensor picks up human voices up to 10 meters without being disturbed by a local speakerphone.

Dynamic Detection Optimizes Meeting Experience

The dual-lens design detects real-time motion precisely while offering a complete view of the room simultaneously. When the second AI lens detects a newcomer walking in, it triggers the first PTZ camera to re-frame the participants, ensuring all meeting attendees are instantly captured for a seamless collaboration.

Smart Gallery Delivers a Clearer View of Faces

Perfectly see everyone in the room. Thanks to AI technology, Smart Gallery crops meeting attendees and displays them in equal individual feeds. It highlights participants' facial and body expressions, leading to effective hybrid meetings.

Interact with CAM570 Using Touchless Gesture Control

With the application of AI to recognize gestures and interpret commands, you can turn on/off the tracking function and zoom in/out without any direct physical touch. Reduce physical touchpoints and improve workplace hygiene.

Picture-in-Picture Displays Preferred Conference View

CAM570 includes a PTZ camera with 36X total zoom and a second AI lens to provide a panoramic view. The dual-lens design offers a speaker view and wide-angle view simultaneously with various PIP layout options. It is ideal for larger and more complex meeting spaces.
